

Why dilute your tea or coffee with normal milk

Our coffee creamer is made from **pure natural milk** -- water is removed but nothing else is added.

No colouring, artificial flavouring, preservatives, stabilizers, and emulsifiers added.

Concentrated to three (3) times by processing three (3) litres of **pure milk** in a centrifugal machine to remove the tasteless water. The end result is one (1) litre of quality **natural cream** - just right for your coffee or tea.

Tiny white specks of milk fat could be visible on hot coffee because no stabilisers are used.
